

Hardware

We provide a powerful and fault-tolerant server for each client installed into a controlled and fireproof space. The server is equipped with RAID secured hard disks to protect data during possible breakdowns.

Network

The Statistics Portal is connected to a fast 100 Mb/s network, which ensures fluent telecommunications without delays. The service has access to backbones of three independent operators to avoid breakdowns.

We reserve a static IP address for each client portal, which can either be named as a subdomain of the *jalavan.net* domain controlled by us, or be named as a domain controlled by the client.

Software

The service is executed under the safe and reliable Linux® operating system. Statistics data is maintained in the fast and secure MySQL® database. We continuously develop our Simsoft Tammi® server software and its newest version is automatically in use in the Statistics Portal.

Security

All communications to the Statistics Portal are secured by default. A user id to the service allows read and write access only to statistics data of user's own unit and read access to sum data of the corresponding group.

Statistics data is stored into fault-tolerant hard disks and backups are made once per month. Daily backups are available as an option.

Confidentiality

We acknowledge that all right, title and interest in the statistical data shall be solely owned by the client. Our maintenance id to the service does not allow read or write access to client specific statistics data.

Demonstration

The home pages of the Statistics Portal at stats.jalavan.net provide more information about the features of the service. To have a closer look at the service, please, take a tour of the demo version at demo-stats.jalavan.net. Note however that the demo provides only read access to administration tasks.

Contact Information

We are pleased to tell you more about the Statistics Portal and how you would benefit from the services it provides.

CLIENT ORIENTED STATISTICS PORTAL

Simsoft Oy has developed together with **The Association of Finnish Technical Traders** a new Internet portal for compiling and reporting statistics on production, sales, storage and other parameters of enterprises and associations. The Statistics Portal provides all hardware, network connections and software required to run a customised statistics service.

We provide our clients with this dedicated Statistics Portal without limitations related to amounts of data or end users for a fixed monthly fee of **500 €**. In addition, we charge the start-up cost, starting from 1000 €, including hardware and software installation, creation of sample statistics and report templates, and client training. The outlook of portal pages may also be customised to be consistent with the outlook of home pages of the client. The start-up fee may vary depending on the amount of customisation.
